

MINERAL BAND HEATERS

Features & Benefits

- Maximum watt densities; far in excess of any other type of band.
- Highest application temperatures available.
- Best possible clamping resulting in improved efficiency.
- Longest life available for any application and reduction of equipment downtime.
- High heat transfer rates and the resulting fast response.
- Rapid heat-up capabilities and no fear of heater failure.
- Reduced number and physical size of heaters required per application.
- Choose a Better Band when the temperature of the heater will exceed 650°F (343°C).
- Expandable or two-piece construction.
